

MongoDB Hadoop Connector

Partner Brief

“MongoDB and Hortonworks are two of the leading technologies in the Big Data space, working together on a complementary, game changing integration.”

Vijay Vijayasankar

VP, Global Channels and Business Development
MongoDB Inc

MongoDB makes development simple and beautiful. For tens of thousands of organizations, MongoDB provides agility and the freedom to scale. Fortune 500 enterprises, startups, hospitals, governments and organizations of all kinds use MongoDB because it is the best database for modern applications. Through simplicity, MongoDB changes what it means to build. Through openness, MongoDB elevates what it means to work with a software company.

MongoDB and Hadoop are a powerful combination and can be used together to deliver complex analytics and data processing for data stored in an operational database. MongoDB is a leading operational database designed for real-time applications. Hadoop is the analytical infrastructure of choice. The MongoDB Connector for Hadoop makes it easy for users to transfer the real-time data from MongoDB to Hadoop for analytical processing. The results of the analyses run in Hadoop can then be funneled back into MongoDB to create an enriched operational database that will better serve end users.

Data Driven

Business Decisions

The pairing of MongoDB and HDP allows for fast data processing and complex analytics so that enterprises can quickly garner insights to help drive business decisions.

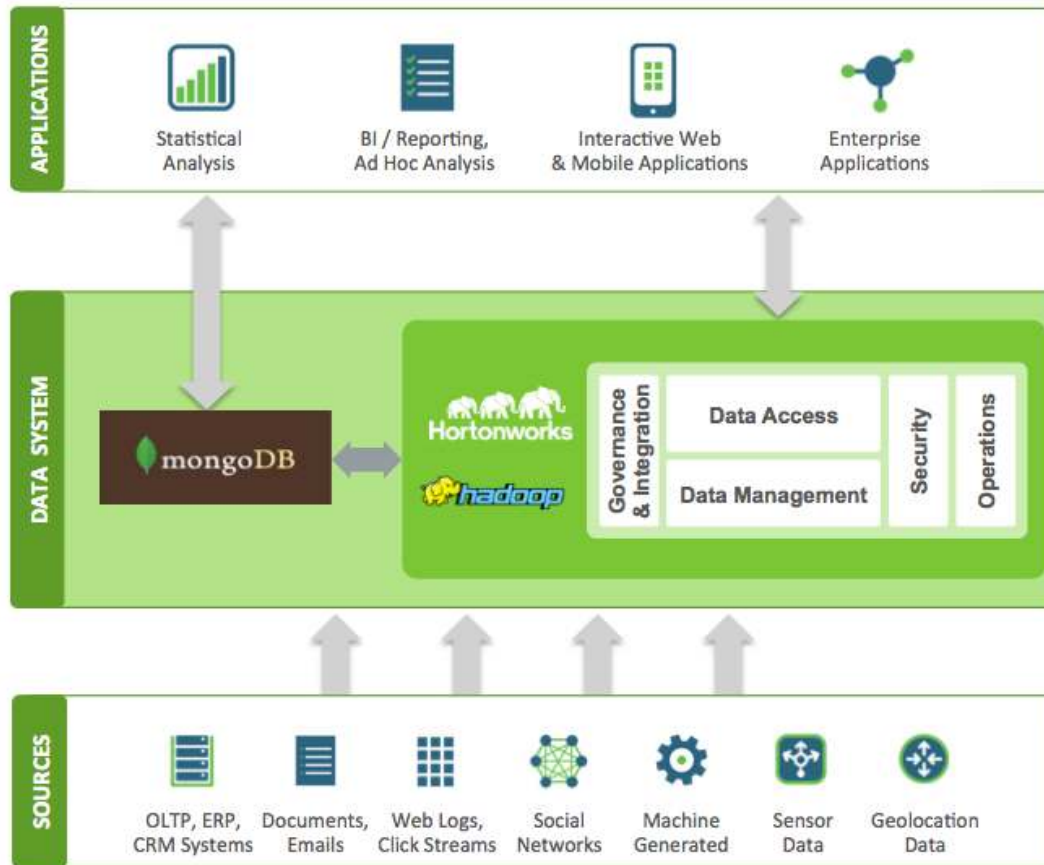

Leverage Existing Tools

The MongoDB connector plugs seamlessly into the existing Hortonworks partner ecosystem and integrates into a wide variety of business intelligence applications.

Cost Effective

Both MongoDB and Hadoop are Open Source technologies, which enable new types of analyses that can significantly reduce the bottom line.

MongoDB in the Modern Data Architecture

Features and Benefits of Combined Solution

- MongoDB and Hortonworks work together to deliver a powerful Big Data solution for complex analysis and data processing
- MongoDB Connector for Hadoop is a free, Open Source tool to integrate MongoDB with the Hortonworks Data Platform (HDP)
- MongoDB is the fastest growing, real-time operational database and complements Hadoop's powerful analytical platform.

MongoDB Hadoop connector

MongoDB and HDP are complementary technologies; operational and analytical databases respectively.

MongoDB is a Certified Technology Partner

The Hortonworks Certified Technology Program reviews and certifies technologies for architectural best practices, validated against a comprehensive suite of integration test cases, benchmarked for scale under varied workloads and comprehensively documented.

Hortonworks. We do Hadoop.

Hortonworks is a leading commercial vendor of Apache Hadoop, the open source platform for storing, managing and analyzing Big Data. Hortonworks Data Platform, our distribution of Apache Hadoop, provides an open and stable foundation for enterprises and a growing ecosystem to build and deploy Big Data solutions.

Hortonworks is the trusted source for information on Hadoop, and together with the Apache community, Hortonworks is making Hadoop an enterprise data platform. Hortonworks provides unmatched technical support, training and certification programs for enterprises, systems integrators and technology vendors.
